Usability Testing Report

By: Amy Muro

Dr. Sarah Robblee

ENG 5336: Document Design

April 26, 2026

Executive Summary of Results

- All participants had positive attitudes towards the two documents and gave constructive feedback.
- All participants had recommendations for expanding a few of the duties and changing an image on the closing and opening duties documents.
- 2/5 participants had a comment about the disability doors in both documents.
- A participant completed the pre-test survey but could not complete the three tasks or post survey in time, and I had to replace them with a new participant to begin the report on time.
- All participants finished the three tasks within 10 minutes.

Introduction

The client for this project is a Clinic Operations Supervisor at Christus Trinity Clinic located in San Marcos, Texas. I decided to conduct a usability test on Opening Clinic Duties and Closing Clinic Duties that are to be posted as posters at the clinic by their desks. These documents are to be used by Clinic Patient Representatives and the Lead Clinic Patient Representative. Both documents have similar duties, are in the same format, and are used by the same employee (some employees are openers and closers), which is why I decided to group them together to conduct a usability test. These duties are crucial to set up the clinic for success regarding both the patient's safety and the employees' roles. The supervisor noted that opening and closing duties can often be overlooked and wanted to ensure that every Clinic Patient Representative had access to a checklist or reminder of the duties.

Purpose

The purpose of the documents is to serve as a small checklist and reminder to the CPR's who work under the supervision of the Clinic Operations Supervisor. The Supervisor wants to ensure that her CPR's are understanding the respective opening and closing duties. The users (CPRs) will need these documents to check themselves before opening and/or closing the clinic. These documents were the most important to user test because I felt they were going to be referenced the most, and the client mentioned that these duties were most important to her for the success and presentation of the clinic.

Methods

Participants

At the beginning of the recruitment process, I spoke to the supervisor about asking all her CPRs to participate in the test and surveys. I recruited 4 CPRs and 1 Lead CPR who worked in the clinic where the documents were to be posted. **Unfortunately, 1 CPR could not finish the remainder of the usability testing, and I had to recruit another participant at the last minute**. **Please note that in the pre-test survey, I had 6 participants. The tasks and post-test survey only had 5 participants.** In these results, the participants consisted of 3 CPRs, 1 Lead CPR from the Christus Trinity Clinic, and 1 CPR from the Christus Urgent Care. I asked for their name, job title, and number of years working (Figure 1). I conducted a pre-test survey via Google Forms, then a usability test via Zoom with a matching Google Form, and finally a post-test survey via Google Forms.

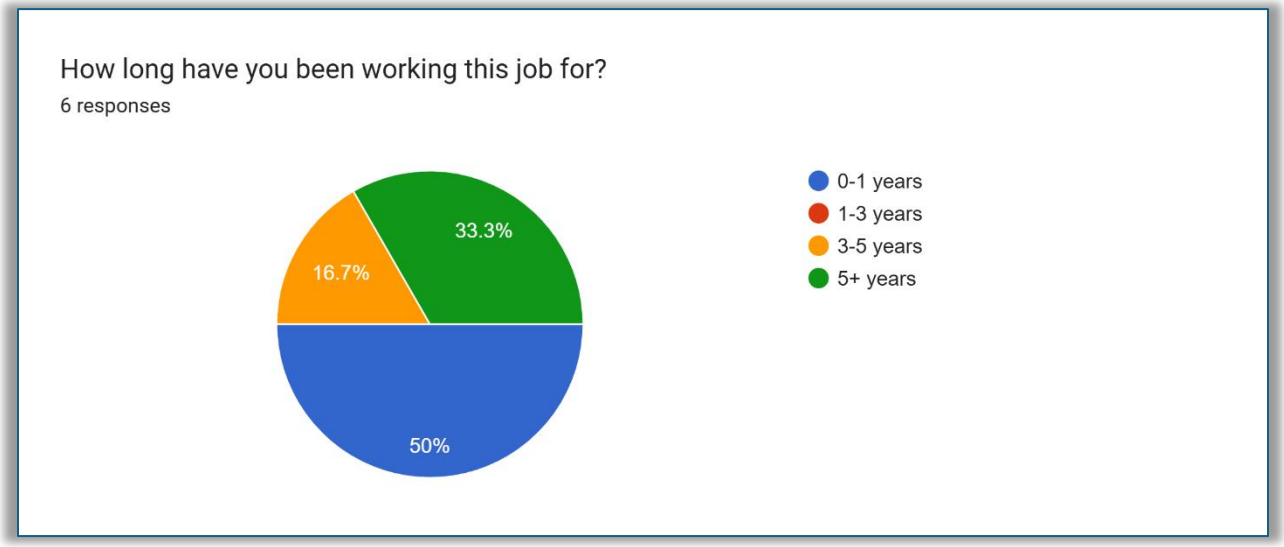

Figure 1. Shows how many years 6 respondents have worked at their jobs.

Methods

Materials

I used Google Forms for the pre- and post-test surveys. The tasks were displayed in a Google Form as well. I had compiled all the participants' emails and sent them all the links, as well as the two documents that needed to be used alongside. I used Google Forms for everything because it works very well to compile data.

Methods

Procedures

Pre-Test Survey: The survey consisted of 9 required questions, 11 questions total. (See Appendix A). Questions included general understanding of the participants, their knowledge of opening/closing clinic duties, and their job duties. The pre-test survey was conducted on their own time, and I was not present for it.

Three Tasks: The three tasks consisted of a location task (figure 2), a hypothetical scenario task (figure 3), and a visual task (figure 4). One task for the opening clinic duties document, one task for the closing clinic duties document, and one task regarding both documents. The three tasks were conducted over Zoom; I met with every participant to ensure that they didn't have any questions or concerns. I had the supervisor print both documents on paper so that they could view them side by side while completing the three tasks online on a computer.

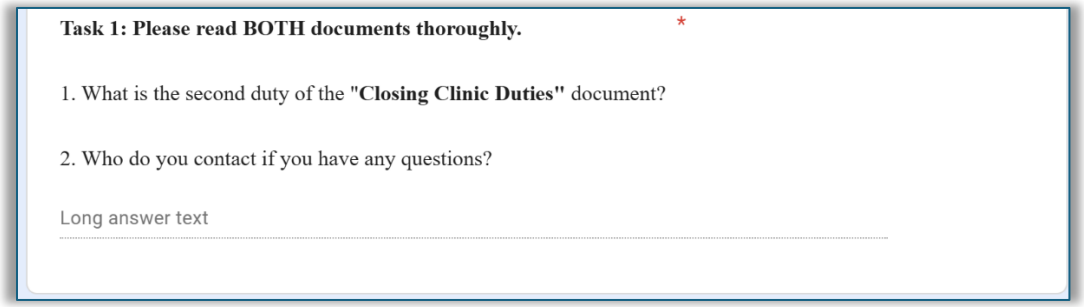

Figure 2: Task 1

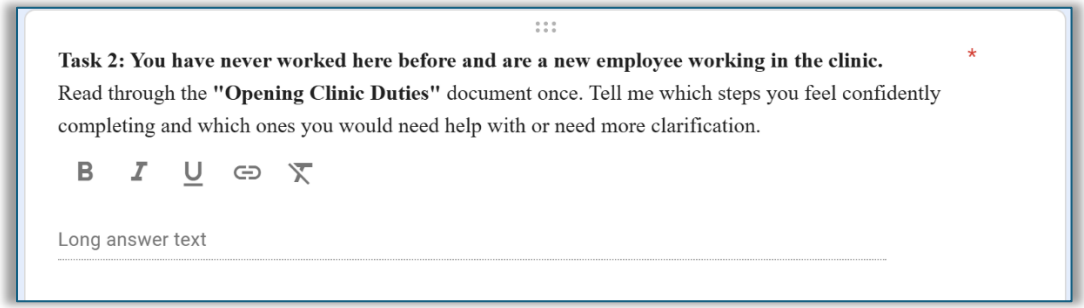

Figure 3: Task 2

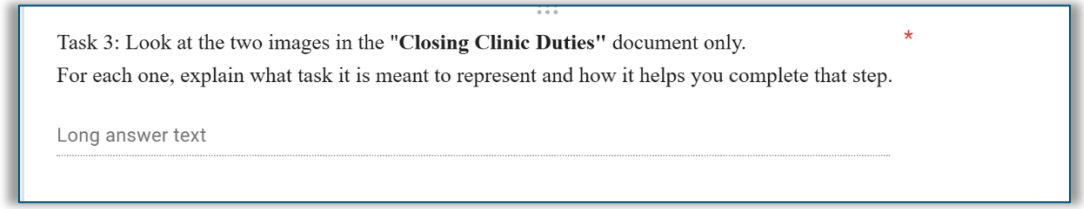

Figure 4: Task 3

Post-Test Survey: The post-test survey consisted of 11 required questions, 12 questions overall. (See Appendix B). Questions included specific improvement feedback, such as images, and order of the documents, feelings about the three tasks, and emotions and comments of the entire process.

Results

Pre-Test Survey: The overall responses of the pre-test survey were that 3/6 of the participants had done clinic opening duties (Figure 5), and 4/6 did closing duties. When asked on a scale of 1-10 how well informed they were of their job duties, 4/6 chose 10. If they needed help in understanding the opening/closing duties, almost all said they asked the CPR lead or Supervisor. This survey was the easiest and fastest to complete.

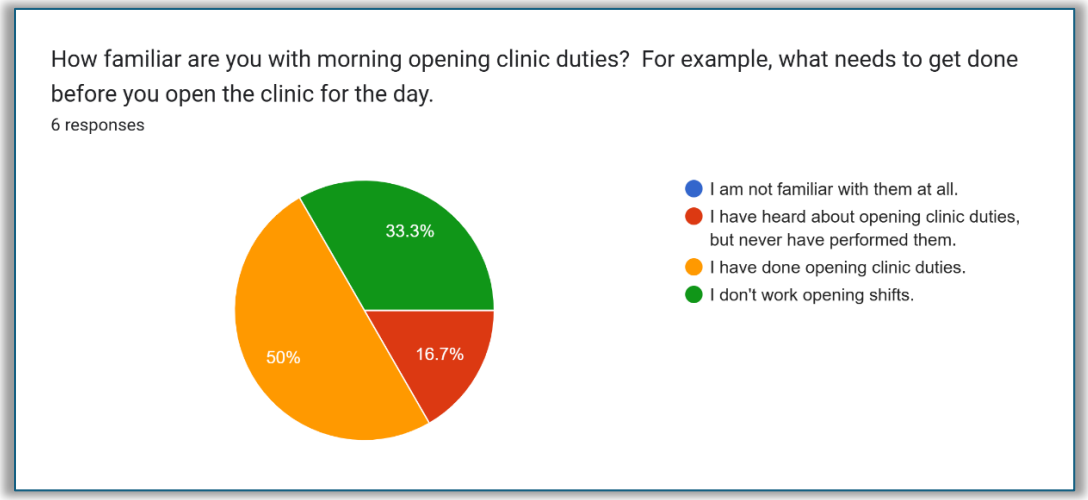

Figure 5: The results of the participants over their knowledge of morning opening clinic duties.

Task 1: There were more successes than failures, as this task was to ensure that participants could find information only. Every participant got the task correct, and was able to tell me who to contact, and what the second task was for the Closing Duties document. This task took about 30 seconds to a minute, which indicated that the document was not overwhelming or that the visuals weren't obscuring the text. In fact, I asked how easy it was to find the information, and 100% of the participants said it was very easy. (Figure 6)

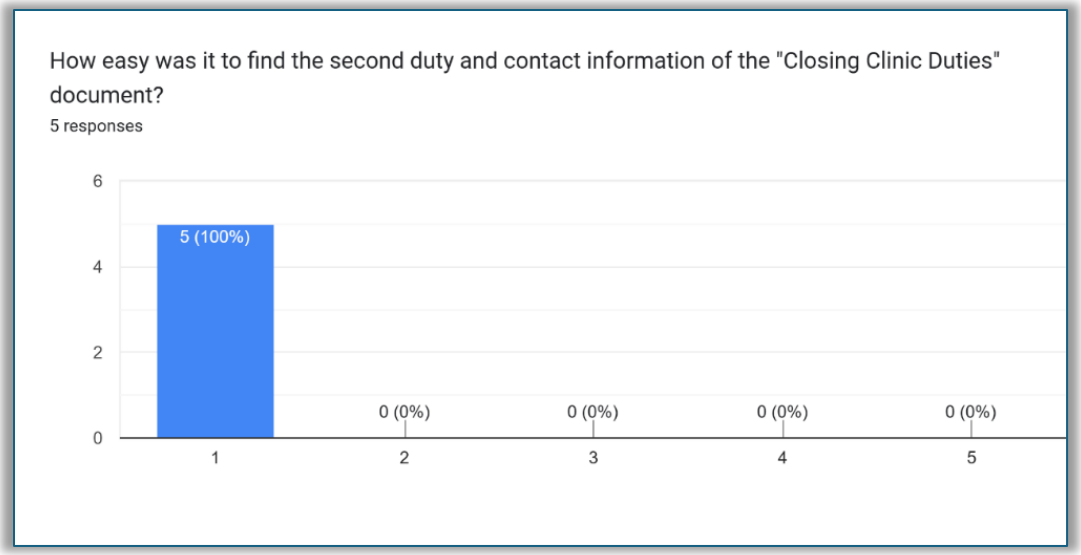

Figure 6: The results of the participants on how easy task 1 was on a scale of 1-5. 1 being very easy and 5 being very difficult.

Task 2: This task asked the participants to put themselves in a hypothetical scenario where there were new workers who read the Opening Clinic Duties document, and to understand how confident they were in completing those duties. This task took much longer than the previous, about 5-7 minutes, as I asked them to tell me which steps they felt confident in taking on their own and which ones they would need more clarification. The results showed that in the Opening Clinic Duties, **duty #1 (Turn on disability automatic doors)** and **duty #5 (Count the cash drawer)** were mentioned as needing more clarification. (Figure 7). I noticed that #1 and #5 were more specific action-based duties and learned that I need to expand on them. While on the Zoom call, a participant talked about the button for the disability doors and mentioned that the button is hidden between a pillar and a plastic casing. She mentioned that as a new worker, it would be difficult to find.

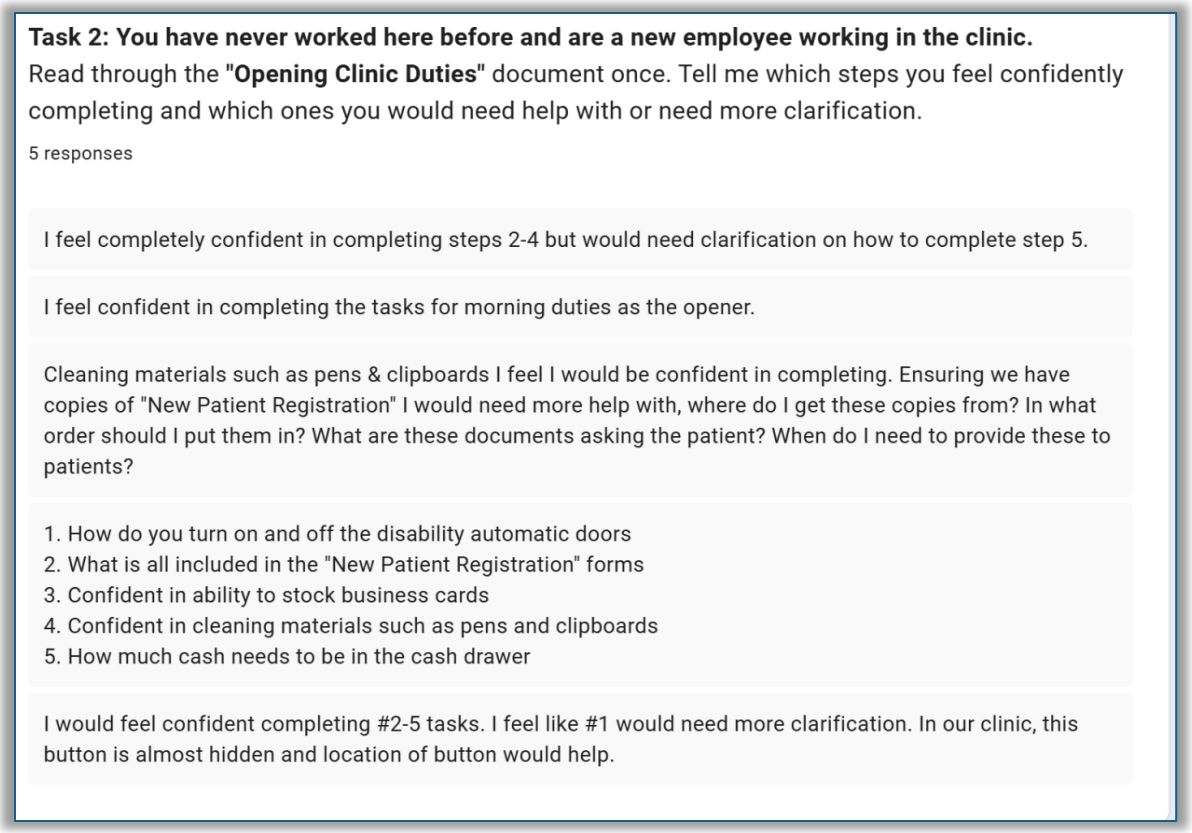

Figure 7: The answers of all participants for Task 2.

Task 3: This task focused on the visuals that I had put on the Closing Clinic Duties document. While this one took under 5 minutes, there were a few errors in this task. ALL images were generic, which I pulled from Canva. The first image on the Closing Clinic Duties document was a light switch to correlate with task 1 **(Lock all doors, turn off front desk lights, and lobby lights).** However, someone correlated the image with turning off the disability doors and the light switches. It seems that there needs to be a clear picture of the button and mechanism for the disability doors so that it doesn't look like it's just a light switch**.** The second image did much better, and participants responded that the image served to help them understand task 3 **(Clean the lobby of trash, and sanitize tables, chairs, and counters.)** But another participant said that the image correlates with wiping down the desk, which slightly doesn't encompass task 3 fully. These results indicate that I am going to take pictures of the actual clinic disability doors' button, and potentially a broader cleaning image of the clinic.

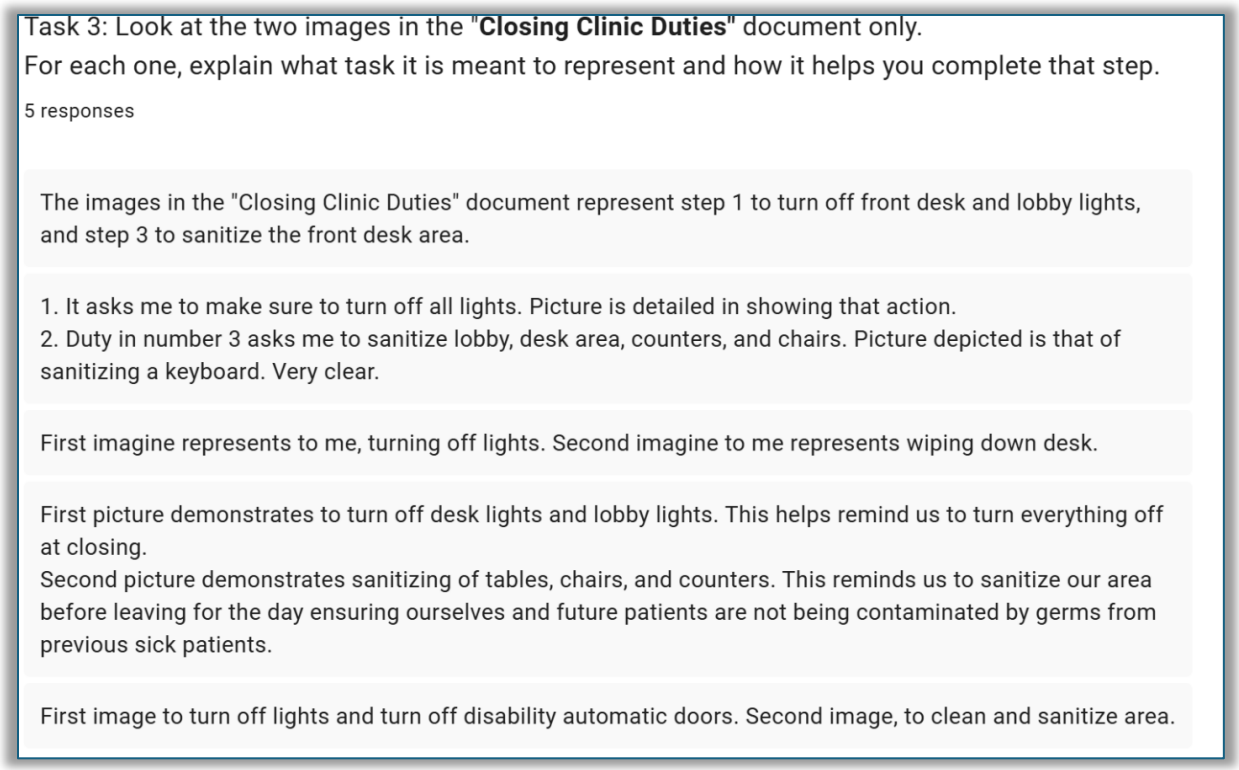

Figure 8: Participant's answers to task 3.

Post-Test Survey: In this survey, all participants found the information to be easily read, and the images were easy to visualize. No one had any issues with the formatting or the way the document looked. (Figure 9) I asked participants about the order of the duties in both documents, and 1/5 participants had an inquiry about switching the order of one duty, but nothing more.

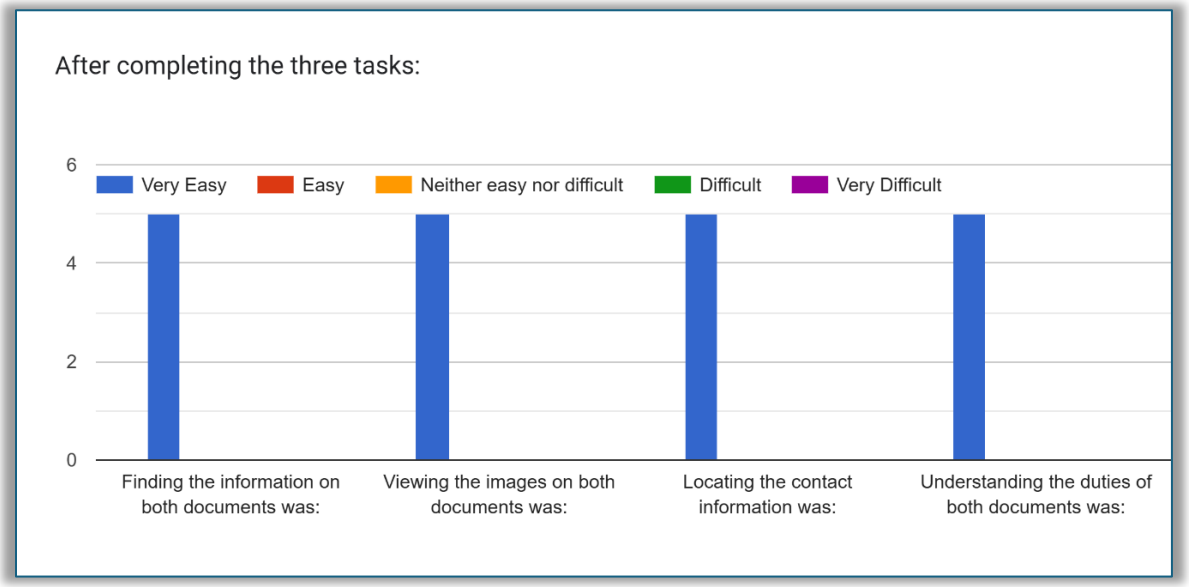

Figure 9: The participants' results on the readability and understanding of the documents after the three tasks.

When asked about the vagueness of the duties in both documents, 4/5 participants had something more to add to the duties. (Figure 10) I found that direction was important, and I needed to add directions and location to some of the duties.

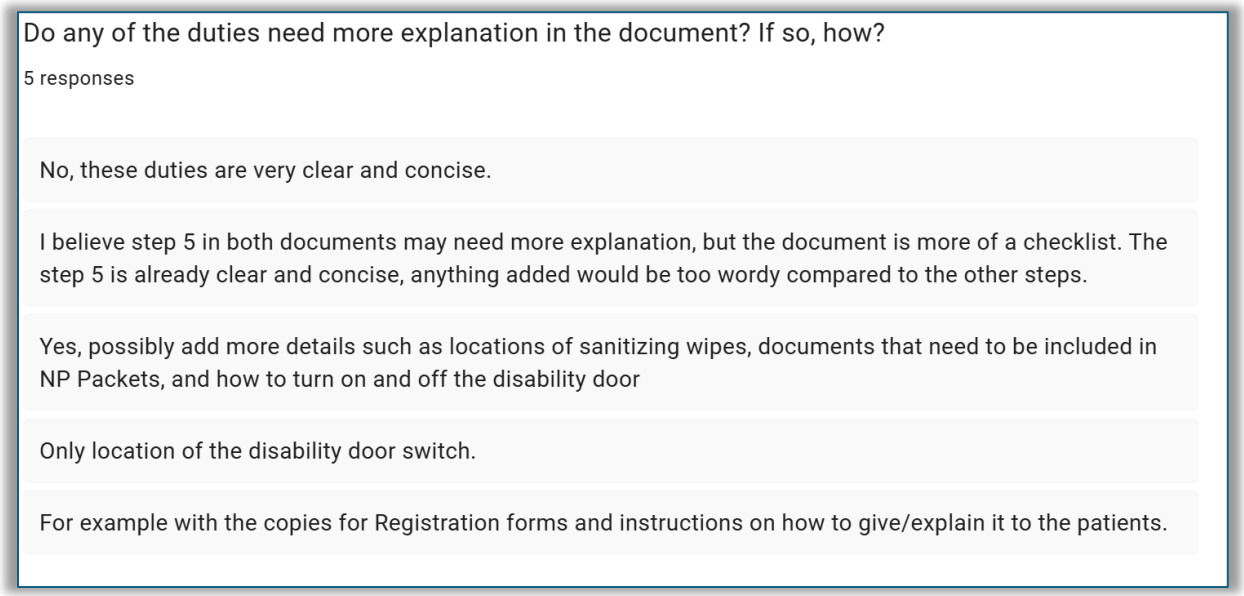

Figure 10: Participant's recommendations about the explanation of the duties.

Recommendations

The following is a summary of the changes I will be making to the next draft of the document, and I will send it to my client:

To begin with, the use of generic images in both documents was not very successful. The participants' comments emphasized the use of pictures that correspond to the clinic rather than generic images. **I recommend a visit by me to the clinic to take a few pictures of the disability door button, the clinic's cleaning supplies, and potentially the light switches**. This will ensure that employees can match the pictures to the physical workplace, making it easier for them to complete their perspective tasks.

While the documents were easy to read due to the duties being straightforward and short, not all duties were acceptable if there was a new hire. Almost all participants recommended a few more sentences or explanations for some of their duties. **I will add a sentence or two to the tasks that lacked information to complete, ensuring that there is ample information to guide a new hire and current employees. Such as the location of the disability doors, the alarm warning, and the location of the cleaning supplies.**

Appendices

Appendix A

First and Last name *

Short answer text

Please state your job title. *

Short answer text

How long have you been working this job for? *

- 0-1 years
- 1-3 years
- 3-5 years
- 5+ years

What are a few of your job duties? One sentence is okay or a list! *

Long answer text

On a scale of 1-10 how well informed are you, of your job duties? *

	1	2	3	4	5	6	7	8	9	10	
I do not know anything about my job duties.	○	○	○	○	○	○	○	○	○	○	I know my job duties very well.

How familiar are you with morning opening clinic duties? *
For example, what needs to get done before you open the clinic for the day.

- ( ) I am not familiar with them at all.
- ( ) I have heard about opening clinic duties, but never have performed them.
- ( ) I have done opening clinic duties.
- ( ) I don't work opening shifts.
- ( ) Other: _____

If you have performed opening clinic duties, what does that consist of? In two to three sentences. *
If not, state N/A.

Long answer text

How familiar are you with closing clinic duties? *
For example, what needs to get done after you close the clinic.

- ( ) I am not familiar with them at all.
- ( ) I have heard about closing clinic duties, but have never performed them.
- ( ) I have done closing duties.
- ( ) I don't work closing shifts.
- ( ) Other: _____

If you have performed closing clinic duties, what does that consist of? In two to three sentences. If not, state N/A.

Long answer text

Is there a document or person you can go to if you are unsure of what do to do for opening/closing clinic duties? *

Short answer text

If yes, please state who or what document you use.

Short answer text

Please use this section for any other information you may want to tell me!

Long answer text

Appendix B:

First and Last name *

Your answer

Overall, how helpful were the documents in completing your three tasks? *

	1	2	3	4	5	
Not helpful it was difficult.	○	○	○	○	○	Very helpful, they made it easier.

After completing the three tasks: *

	Very Easy	Easy	Neither easy nor difficult	Difficult	Very Difficult
Finding the information on both documents was:	☐	☐	☐	☐	☐
Viewing the images on both documents was:	☐	☐	☐	☐	☐
Locating the contact information was:	☐	☐	☐	☐	☐
Understanding the duties of both documents was:	☐	☐	☐	☐	☐

How confident are you in performing the Opening duties? *

	1	2	3	4	5	
Not confident at all	○	○	○	○	○	Very confident

How confident are you in performing the Closing duties? *

	1	2	3	4	5	
Not confident at all	○	○	○	○	○	Very confident

The images on both documents are generic images and are not from the clinic. Would you prefer the images to correlate with the Christus Trinity Clinic?
For example, a picture of someone you know turning off the disability doors in your clinic? *

Your answer

Did the order of the steps of both documents feel logical? *

- ○ Yes
- ○ No

If yes, why did they feel logical?
If no to the question above. How would you order the duties of one or both documents? *

Your answer

What is one thing you would change to improve any of the documents? *

Your answer

Do you think any of the duties were too vague and short? If so, why? *

Your answer

Do any of the duties need more explanation in the document? If so, how? *

Your answer

Please let me know of any other feedback if any. I greatly appreciate ANY comment.
